The 42nd International Conference on Logic Programming, **ICLP @ FLoC 2026**
Lisbon, 21 July, 2026

The problem: feedback does not scale

- Timely, personalized feedback matters for learning and computer-aided education.

The problem: feedback does not scale

- Timely, personalized feedback matters for learning and computer-aided education.
- In large programming courses, instructors cannot inspect every attempt.

The problem: feedback does not scale

- Timely, personalized feedback matters for learning and computer-aided education.
- In large programming courses, instructors cannot inspect every attempt.
- Logic programming adds a twist: novices struggle with declarative execution, non-determinism, and non-termination.

The problem: feedback does not scale

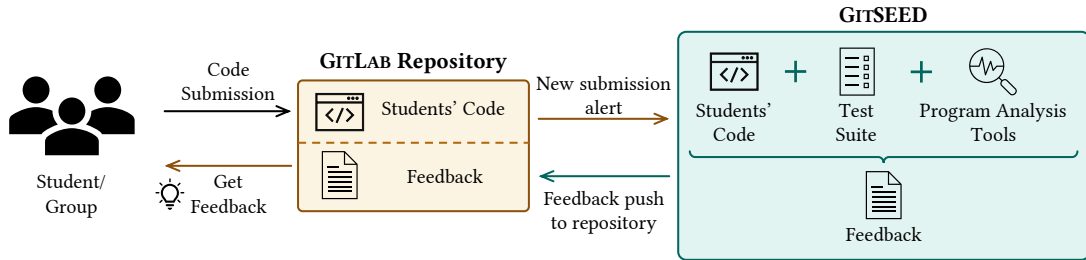

- Timely, personalized feedback matters for learning and computer-aided education.
- In large programming courses, instructors cannot inspect every attempt.
- Logic programming adds a twist: novices struggle with declarative execution, non-determinism, and non-termination.

Question

Can automated feedback help students debug PROLOG, and which feedback do students actually value?

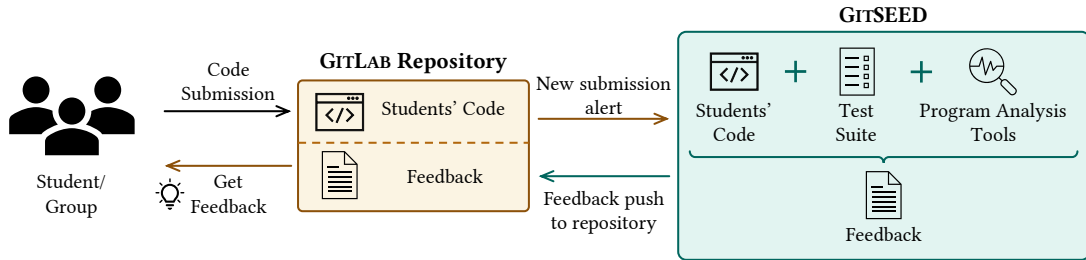

ProHelp: feedback inside the students' Git workflow

Design goal

No new assessment interface: students receive immediate feedback where they already submit and version their code.

ProHelp: feedback inside the students' Git workflow

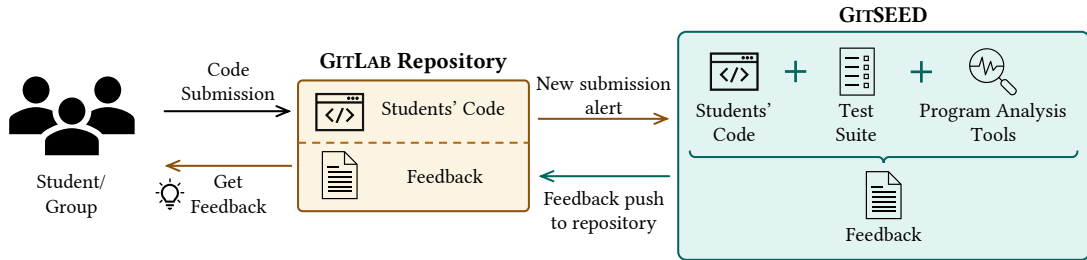

Design goal

No new assessment interface: students receive immediate feedback where they already submit and version their code.

- A git push triggers the pipeline.

ProHelp: feedback inside the students' Git workflow

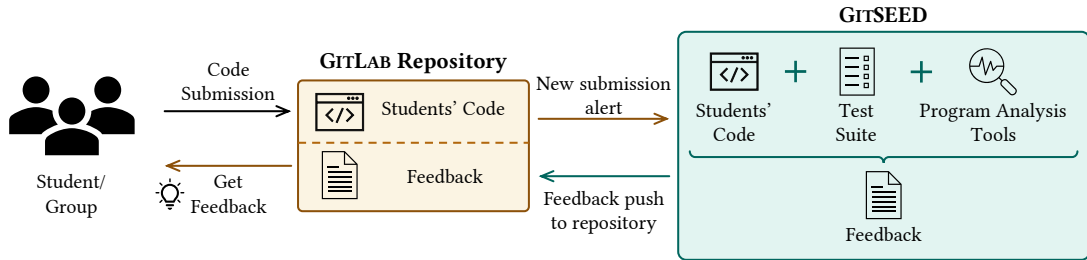

Design goal

No new assessment interface: students receive immediate feedback where they already submit and version their code.

- A git push triggers the pipeline.
- GITSEED runs tests and analyses.

ProHelp: feedback inside the students' Git workflow

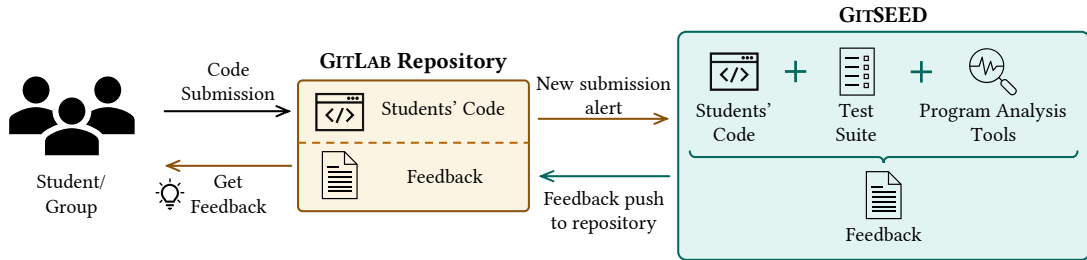

Design goal

No new assessment interface: students receive immediate feedback where they already submit and version their code.

- A git push triggers the pipeline.
- GITSEED runs tests and analyses.
- PROHELP commits a report back to the repository.

ProHelp: feedback inside the students' Git workflow

Design goal

No new assessment interface: students receive immediate feedback where they already submit and version their code.

- A git push triggers the pipeline.
- GITSEED runs tests and analyses.
- PROHELP commits a report back to the repository.
- Students iterate from the feedback.

Seven feedback mechanisms

1. Automatic testing

Test 1: Successful

Test 2: Successful

Test 3: Unsuccessful

Test 4: Successful

Seven feedback mechanisms

1. Automatic testing
2. Predicate scoring

Test 1: Successful

Test 2: Successful

Test 3: Unsuccessful

Test 4: Successful

Scores

Predicate	Current Score	Max Score
pred1/1	0.50	0.50
pred2/1	0.50	0.50
pred3/3	0.00	1.00
Total	1.00	2.00

Seven feedback mechanisms

1. Automatic testing
2. Predicate scoring
3. Syntax highlighting

Test 1: Successful

Test 2: Successful

Test 3: Unsuccessful

Test 4: Successful

Scores

Predicate	Current Score	Max Score
pred1/1	0.50	0.50
pred2/1	0.50	0.50
pred3/3	0.00	1.00
Total	1.00	2.00

Your code contains syntax errors

```
[...]  
  6  
  7 P().  
[...]
```

Seven feedback mechanisms

1. Automatic testing
2. Predicate scoring
3. Syntax highlighting
4. Open choice-point warnings

Test 1: Successful

Test 2: Successful

Test 3: Unsuccessful

Test 4: Successful

Scores

Predicate	Current Score	Max Score
pred1/1	0.50	0.50
pred2/1	0.50	0.50
pred3/3	0.00	1.00
Total	1.00	2.00

Your code contains syntax errors

```
[...]  
  6  
  7 P().  
[...]
```

Test 30: Successful

Warning: your program left open choice points.

Seven feedback mechanisms

1. Automatic testing
2. Predicate scoring
3. Syntax highlighting
4. Open choice-point warnings
5. Score rankings

Test 1: Successful

Test 2: Successful

Test 3: Unsuccessful

Test 4: Successful

Scores

Predicate	Current Score	Max Score
pred1/1	0.50	0.50
pred2/1	0.50	0.50
pred3/3	0.00	1.00
Total	1.00	2.00

Your code contains syntax errors

```
[...]  
  6  
  7 P().  
[...]
```

Test 30: Successful

Warning: your program left open choice points.

Seven feedback mechanisms

1. Automatic testing
2. Predicate scoring
3. Syntax highlighting
4. Open choice-point warnings
5. Score rankings
6. Solution-type validation

Test 1: Successful

Test 2: Successful

Test 3: Unsuccessful

Test 4: Successful

Scores

Predicate	Current Score	Max Score
pred1/1	0.50	0.50
pred2/1	0.50	0.50
pred3/3	0.00	1.00
Total	1.00	2.00

Your code contains syntax errors

```
[...]  
  6  
  7 P().  
[...]
```

Test 30: Successful

Warning: your program left open choice points.

Seven feedback mechanisms

1. Automatic testing
2. Predicate scoring
3. Syntax highlighting
4. Open choice-point warnings
5. Score rankings
6. Solution-type validation
7. Unknown-predicate suggestions

Test 1: Successful

Test 2: Successful

Test 3: Unsuccessful

Test 4: Successful

Scores

Predicate	Current Score	Max Score
pred1/1	0.50	0.50
pred2/1	0.50	0.50
pred3/3	0.00	1.00
Total	1.00	2.00

Your code contains syntax errors

```
[...]  
  6  
  7 P(() .  
[...]
```

Test 30: Successful

Warning: your program left open choice points.

Unknown predicate: `maplistx/3`

Maybe you meant one of the following predicates: `maplist/3`, `maplist/2`, `maplist/4`

Seven feedback mechanisms

1. Automatic testing
2. Predicate scoring
3. Syntax highlighting
4. Open choice-point warnings
5. Score rankings
6. Solution-type validation
7. Unknown-predicate suggestions

Range

Correctness, localization, Prolog-specific behavior, and implementation constraints.

Test 1: Successful

Test 2: Successful

Test 3: Unsuccessful

Test 4: Successful

Scores

Predicate	Current Score	Max Score
pred1/1	0.50	0.50
pred2/1	0.50	0.50
pred3/3	0.00	1.00
Total	1.00	2.00

Your code contains syntax errors

```
[...]  
  6  
  7 P(( ).  
[...]
```

Test 30: Successful

Warning: your program left open choice points.

Unknown predicate: `maplistx/3`

Maybe you meant one of the following predicates: `maplist/3`, `maplist/2`, `maplist/4`

Study at a glance

Deployment

Did students think feedback helped?

Did students think feedback helped?

Helpful?

Most respondents agreed that the automated feedback helped improve their course grade.

R1: Students found all types of feedback helpful

Clear winner

Automatic testing was rated most useful: 74% of valid respondents selected the highest usefulness level.

Result 2: Who found ProHelp helpful?

RQ2

Do students' prior interest and behaviour affect how helpful they find ProHelp overall?

Interest in Prolog

No evidence of an effect

Result 2: Who found ProHelp helpful?

RQ2

Do students' prior interest and behaviour affect how helpful they find ProHelp overall?

Interest in Prolog

No evidence of an effect

Use of optional exercises

No evidence of an effect

Result 2: Who found ProHelp helpful?

RQ2

Do students' prior interest and behaviour affect how helpful they find ProHelp overall?

Interest in Prolog

No evidence of an effect

Use of optional exercises

No evidence of an effect

Use of LLMs

No evidence of an effect

Result 2: Who found ProHelp helpful?

RQ2

Do students' prior interest and behaviour affect how helpful they find ProHelp overall?

Interest in Prolog

No evidence of an effect

Use of optional exercises

No evidence of an effect

Use of LLMs

No evidence of an effect

Answer

There is no evidence that interest level, use of the platform for optional exercises, or use of LLMs affects how helpful students found ProHelp overall.

What students want in the future?

Future directions

Students want stronger diagnosis and repair support, but the system should guide without simply revealing the solution.

Takeaways

1. **Automated feedback can scale support** for large logic-programming classes.

Takeaways

1. **Automated feedback can scale support** for large logic-programming classes.
2. Students considered all seven feedback mechanisms useful, with **automatic testing ranked first**.

Takeaways

1. **Automated feedback can scale support** for large logic-programming classes.
2. Students considered all seven feedback mechanisms useful, with **automatic testing ranked first**.
3. Prolog-specific diagnostics add value beyond pass/fail testing.

Takeaways

1. **Automated feedback can scale support** for large logic-programming classes.
2. Students considered all seven feedback mechanisms useful, with **automatic testing ranked first**.
3. Prolog-specific diagnostics add value beyond pass/fail testing.

Can Automated Feedback Turn Students into Happy Prologians?

Yes, automated feedback can make happier Prologians, especially when it is immediate, concrete, and helps them debug rather than merely grades them.
